

Field Fix Procedure

Re-program the engine ECU with revised calibration file 56042300-ii.cuw, tabled below, when you receive a customer complaint.

Important Note:

Some vehicles may also be involved in the CSE for diesel engine stall – refer ADSL SL13/08 dated Nov '08.

Dealers are requested to confirm Calibration ID before reprogramming for revised shift mapping.

If current Calibration ID is 360A7000 or 360A7100 or 360A7200, then perform Diesel engine stall reprogramming per CSE first, then proceed to reprogram using calibration ID 56042300.

ECU Reprogramming Procedure

Refer to Service Bulletin Group 04, No.1 issued June 2008 for detailed procedure.

ECU Reprogramming Cautions

- Confirm any accessories such as CB radio connected directly to the vehicle battery are disconnected before reprogramming, to ensure there is no possibility of battery voltage fluctuation.
- Ensure battery is fully charged between 12 to 14 volts.
- If battery voltage is below 12 volts, charge the battery – do not reprogram ECU while charging the battery. Ensure battery charger is disconnected before commencing reprogramming.
- Switch off all electrical loads including audio, heater, interior light etc.
- Do not enter or exit the vehicle during reprogramming, to ensure no voltage fluctuation occurs during reprogramming.

Note:

If you are unsure how to perform the reprogramming procedure, contact the Technical Help Desk or your regional service representative for assistance.

Previous Calibration ID (CID) Information for Reference

Model	ECU P/No.	Current CID
VDJ200 SVP ~ 06/2009	89661-60F70	360A7000 or 360A7100 or 360A7200 or 360A7300

ECU Program Files

The following table provides details of attached calibration software download links.

Item	Purpose	Link to Download
Driver for USB	-	 WinRTUSBDriver_v103.exe
CUW Software to download the Cal Data from PC to IT 2	To download the Calibration Data from PC to IT 2	 CUWV8.7.0.exe
VDJ200 Calibration Data File	6 th gear engagement improvement	 56042300-ii.cuw
